35. (New) The processor of claim 6, wherein the instruction in which source data must be retrieved from the external memory device is a long latency instruction.

36. (New) A system comprising:

a memory; and

a processor coupled to the memory, the processor including an execution unit to execute instructions and a replay system coupled to the execution unit to replay instructions which have not executed properly, the replay system having a checker to determine whether each instruction has executed properly and a replay queue coupled to the checker to temporarily store one or more long latency instructions until the long latency instruction is ready for execution.

37. (New) The system of claim 36, wherein the replay system further includes:

a replay loop to route an instruction which executed improperly to the execution unit for replay; and

a replay queue loading controller to determine whether to load an improperly executed instruction to the replay loop or into the replay queue.

38. (New) The system of claim 36, wherein the long latency instruction is to be unloaded from the replay queue if the instruction is ready to execute properly.

39. (New) The system of claim 38, wherein the replay system is to generate a replay queue select signal in response to the instruction being ready to execute properly.
